## IS THIS HAPPENING TO YOU?

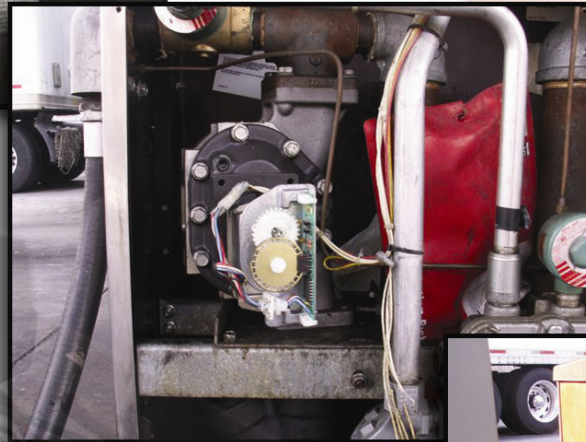

### - FUEL THEFT -

Thousands of gallons are disappearing daily, often in broad daylight.

Thieves have programming keys, wiring harnesses, and circuit boards in stand-alone mode, etc.

Damaged Electronics

Damaged Pulsars

Damaged Doors

The Flint Loc<sup>®</sup>  
Pump Alarm System  
is a FUEL THEFT DETERRENT  
that has saved millions of dollars  
since 2006.

# The Flint Loc<sup>®</sup> Pump Alarm System

has saved millions of dollars  
since 2006

## Offering:

- \* Sleep Mode
- \* Easy One Button Arming/Disarming
- \* 105 db Siren
- \* Visible Status Light
- \* Easy Install / Maintenance Free
- \* Uses Dispenser AC
- \* Technical Assistance Available
- \* 2 Year Warranty

UL Listed Alarm Retrofit Kit

Fuel theft from retail dispensers is a significant loss of revenue for fuel retailers. Gas stations rely on remote monitoring of the fueling process by fuel retailer personnel and "self-service" dispensing of the fuel into the vehicle, making the facilities vulnerable to theft of fuel. Often, by the time the monitoring personnel become aware of the theft, the thieves have already left the facility and the loss has already occurred. When diesel fuel is stolen by a driver of an over-the-highway truck, a massive amount of fuel can be lost in a single theft!

Fuel is stolen from the retail dispensers using various techniques. For example, thieves can open or remove doors or panels on the dispenser to gain access to the dispenser's internal metering components. By disabling this metering component, fuel can be pumped from the dispenser without triggering any indication of fuel flow. In other cases, the dispenser is placed in a programming mode that allows a free flow of fuel. Before the station even knows that the fuel pump has been tampered with, the thieves are long gone.

Flint Loc is Patent Pending  
UL Approved-U.S./Canada  
FCC Approved
